

Finding, downloading, editing and embedding media

Once you have the link to the film (Youtube or Vimeo should both work fine), go to www.clipconverter.cc. This is a website that allows you to download videos from various media hosts. You will be greeted with a box that looks like the following:

The screenshot shows the top section of the ClipConverter website. It features a text input field labeled "Media URL to Download:" with a "Continue" button to its right. Below the input field, a tooltip lists supported services: Direct Download, YouTube (HQ and HD), Google Video, Sevenload, MySpace, Dailymotion (HQ), Vimeo (HQ), Metacafe, MyVideo, Veoh, and SoundCloud. Underneath, there is a "Conversion Format:" section with a "Download" button and two rows of format options: MP3, M4A, AAC and MP4, 3GP, AVI, MOV.

Paste the URL of the video from your browser into the top box and press 'Continue'. You will then be offered a selection of videos available on the page – this will primarily (and 90% of the time only) be various different resolutions of your video. It should look like the following.

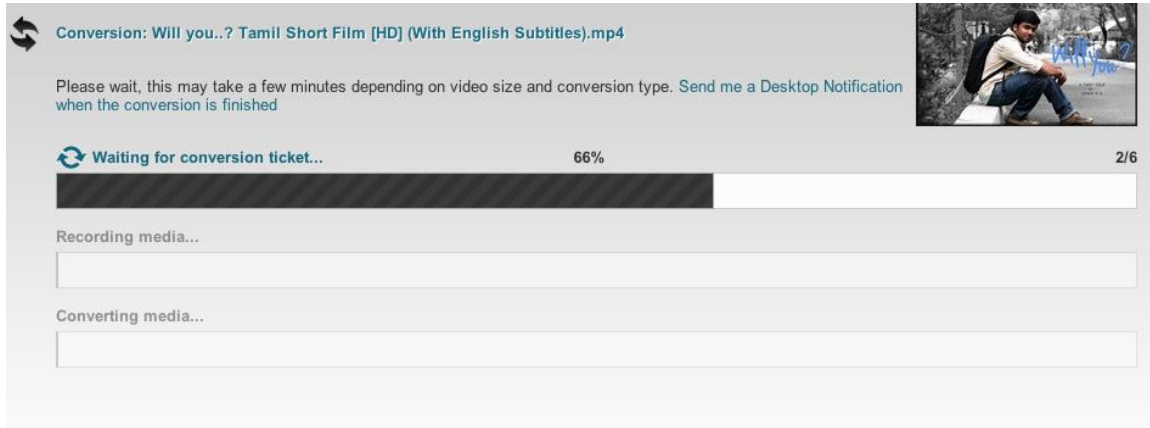

This screenshot shows the next step in the ClipConverter process. The "Media URL to Download:" field now contains a YouTube URL. Below it, the "Detected Media:" section lists five options with radio buttons: "YouTube Video High Definition (1080p), size: 188 MB" (selected), "YouTube Video High Definition (720p), size: 135 MB", "YouTube Video High Quality (480p), size: 60 MB", "YouTube Video Standard Quality (360p), size: 41 MB", and "YouTube Video Mobile Version (3GP), size: 20 MB". A "Show Video" link is next to the list. To the right is a small video thumbnail. Below the list is a "File Name:" field with the text "Will you..? Tamil Short Film [HD] (With English Subtitles)" and a ".MP4" extension. The "Conversion Format:" section is identical to the previous screenshot. At the bottom, there is a "Start!" button and a link to the "Terms of Use".

From this screen, select the video with the highest definition (which tends to be at the top of the list – you can look at the file size to confirm; the larger the file size the better the quality). Under the 'Conversion Format' section you have some options. If you want to just download the complete video, leave 'Download' highlighted white.

You do have the option here however to separate the audio from the video. In the image above, if you click 'mp3' or 'AAC', it will allow you to download only the audio. This could be useful for having listening exercises and in breaking down the film during lessons.

Once you have selected which format and resolution you would like to download, press 'start' and the page will change to a converting page

Conversion: Will you..? Tamil Short Film [HD] (With English Subtitles).mp4

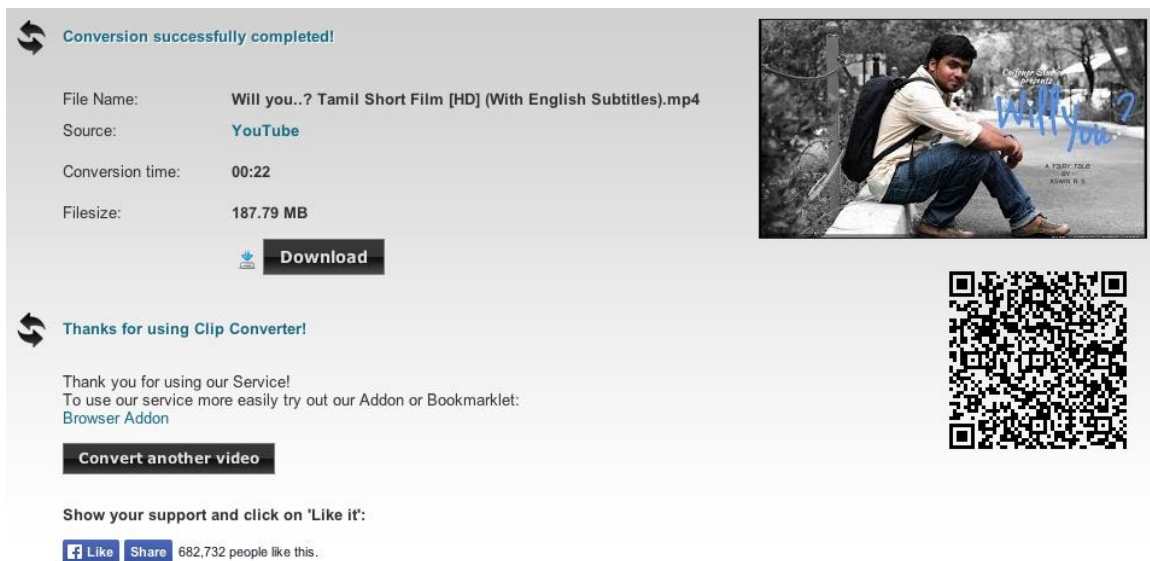

Please wait, this may take a few minutes depending on video size and conversion type. [Send me a Desktop Notification](#) when the conversion is finished

Occasionally, there will be a check box underneath the 'download' button – **make sure this is NOT checked** – and then click 'download' and your file will be saved to your computer. That's it done!

Editing Software

There are countless guides online on using iMovie and Windows Movie Maker – to add my own guide below would be purely duplicating information online, and also different versions have different instructions, so instead I have included below some links to *good* guides.

Windows Movie Maker

To download Movie Maker:

<http://windows.microsoft.com/en-gb/windows/get-movie-maker-download>

Windows actually has their own guide for using Movie Maker, depending on the version you are using.

Windows Live (Windows 7 & 8)

<http://windows.microsoft.com/en-gb/windows-live/movie-maker>

Windows Vista

<http://windows.microsoft.com/en-gb/windows-vista/make-a-movie-in-four-simple-steps>

Windows XP

http://www.visualsteps.com/photovista/Chapter8_MovieMaker26.pdf

iMovie

Your Mac should have come with iMovie pre installed. To check the version, open it and click the 'iMovie' or 'iMovie HD' in your status bar – click 'About iMovie' and it will tell you the version number.

iMovie 6:
